

HANDI FLOOR

M1 Aluminium Floor

*The most
flexible
aluminium floor
on the market*

The floor for all adaptations.

Handi Floor is the basis of your complete solutions for adapting mini vans and buses.

You'll spend less man-hours, and the customer has a more durable solution.

Handi Floor

We have developed the Handi Floor with a high degree of flexibility. This allows you to change the layout on the spot.

Handi Floor is very easy to install. When you become good at it, just one person can lay the floor in a few hours – depending on layout and vehicle model.

The profiles are only 25 mm high – the lowest in the market – which ensures a maximum internal roof height in your vehicle. M1 and M2 approved with a wide range of seats from different manufacturers.

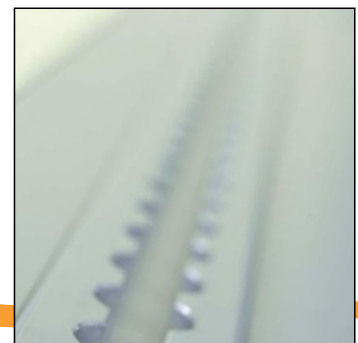

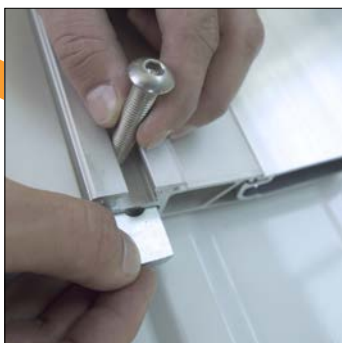

The ideal solution for any application where flexibility and/or reliability are key issues. Perfect for M1 and M2 minibuses, ambulances, prisoner transportation vehicles, crew cabins etc. etc.

Only your imagination sets the limit.

Extra deep rails

Extra deep rails prevent dirt from becoming an obstacle for your rearrangement of the seats.

Dirt and gravel often makes it difficult to slide a seat in the rails. But not in the Handi Floor rails.

Handi Floor Double Airline Track

Nice designs starts at ground level

Nice designs starts at ground level. With Handi Floor you have the flexibility to create the design just as you like. This ensures long term satisfaction based on daily use.

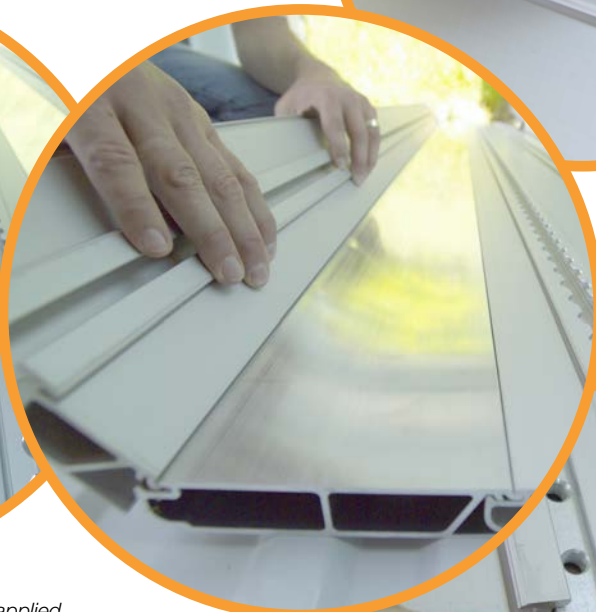

The floor is at its very best when you mount moveable seats and a restraint system (WTORS) – this gives you a multipurpose vehicle that transforms easily.

Rubber seal prevents dirt in the rails.
Part no. 20000

A non-toxic, single-component adhesive applied directly onto the degreased vehicle bottom provides easy and flexible installation of the floor profiles which, again, saves you some time.
Part no. 70278 Even the degreaser is non-toxic. Simple alcohol will do just fine.

Sliders make any seat installation fast and flexible. Columns and cross members will never interfere with your preferred seating layout. You can change your layout with simple tools, making any seating position possible. Part no. 70219
